

WorldCare Limited Announces the Spin-Off of a New Clinical Information Technology Company, WorldCare Technologies Inc.

CAMBRIDGE, Mass., Nov. 23 /PRNewswire/ -- WorldCare Limited, a leading provider of telemedicine and teleradiology services world-wide, announces the spin off of its 3-year old technology division, now known as WorldCare Technologies Inc. WorldCare Technologies will focus on developing and offering state-of-the-art, internet-enabled telemedicine and clinical information management solutions for electronic healthcare delivery. These solutions can extend throughout a healthcare institution's intranet, a local or regional healthcare extranet, as well as a national or international internet service.

"This is a very exciting milestone for WorldCare Technologies and represents a strategic move by the company to focus on supplying web-based clinical information management solutions to the healthcare industry both in the US and abroad," said Eman Safadi, President and Chief Operating Officer of WorldCare Technologies.

WorldCare Technologies provides complete telemedicine network solutions centered around an intelligent, multi-specialty information management system for coordinating the creation, referral, transmission, storage and review of patients' Electronic Telemedicine Records(TM) (ETRs). This system interconnects a range of patient information and image capture and review stations. WorldCare Technologies' product suite is clinically validated in conjunction with its partner hospitals. The company utilizes FDA-cleared wavelet image compression up to 30:1 ratio allowing its telemedicine systems to operate over a variety of communication lines ranging from plain phone lines up to ATM speeds. This telecommunications independence allows WorldCare to operate in many developing markets as well as the United States, Canada and Europe.

WorldCare Technologies has a proven track record supplying the telemedicine technology platform that powers up WorldCare's international telemedicine service network encompassing 12 countries worldwide. WorldCare Technologies systems are deployed at leading US academic medical centers, including Massachusetts General Hospital, Cleveland Clinic Foundation, Duke University Medical Center, and Johns Hopkins Healthcare Systems, and internationally at The London Clinic, UK, Pantai Hospital, Malaysia, and King Faisal Hospital, Saudi Arabia.
